

- Super Sky has a BIPV UL Classified framing system, which can incorporate any UL listed photovoltaic panel.
- Obtain market recognition via sustainable design.
- Energy efficient measures designed from inception.
- Positive short and long term energy economical benefits.
- Green marketing potential.
- Integrated approach to building envelope and photovoltaic system design.
- Engage in positive environmental construction.
- Unlimited design possibilities which optimize architectural expression while creating energy.
- Financial incentives for using photovoltaic systems are offered by both the federal government and state governments.

• LEED points (USGBC).
