DOMES SKYLIGHTS

Dome skylights by Super Sky Products are usually five or more curb segments in plan - more than a pyramid - though they have construction methods in common. Domes can be single or multi-sloped. Typical economical framing patterns can be categorized as A: "radial" and B: "triangulated" within each structural bay (between hips). Both patterns have many similarly shaped lites, compared to geodesic domes which may have dozens.

Super Sky Products offers single source responsibility for dome skylight design, engineering, fabrication, installation, and a ten-year guarantee.
