S-CVR

SINGLE SLOPE SKYLIGHTS

Generally one plane of glass, though two or more could be joined by hips or valleys, or turn into the vertical plane with a "knee". Single slopes can also have vertical ends, forming greenhouse-like enclosures. Most details of plane-changes can be accomplished with a single extrusion, though engineering may require doubled framing members to allow for movement, or to avoid thermal lock-up.

Super Sky Products can integrate all glazing planes in one product system, with single source responsibility for single slope skylight design, engineering, fabrication, installation and a ten-year guarantee.
